

Project Initialization and Planning Phase

Team ID	MCA
Project Title	Smartphone Usage, Digital Addiction & Well-Being Analytic
Maximum Marks	3 Marks

Project Proposal (Proposed Solution) template

This project proposal outlines a solution to address a specific problem. With a clear objective, defined scope, and a concise problem statement, the proposed solution details the approach, key features, and personnel.

Project Overview	
Objective	The primary objective of this project is to analyze smartphone usage patterns and identify factors associated with digital addiction and user well-being.
Scope	The project covers the collection, cleaning, preparation, analysis, and visualization of smartphone usage and well-being data. The scope includes: Analysis of daily smartphone screen time, Analysis of application and social-media usage.
Problem Statement	
Description	Smartphone usage has increased significantly and has become an important part of everyday life. However, physical activity, productivity, stress, and overall well-being.
Impact	The analysis can help the organization: • Understand smartphone usage behavior. • Identify patterns associated with excessive usage. • Identify user groups with different usage patterns.
Proposed Solution	
Approach	The project will follow a structured data analytics approach: 1. Data Collection – Collect a relevant smartphone usage and well-being dataset from an appropriate source.

	2. Data Understanding – Examine tables, columns, records, data types, and key attributes. 3. Data Cleaning – Handle missing values, duplicate records, inconsistent values, and outliers where appropriate. 4. Data Transformation – Convert and prepare the data for analysis.
Key Features	☐ Smartphone Usage Analysis ☐ Screen-Time Analysis ☐ Application Usage Analysis ☐ Digital Addiction Analysis ☐ Sleep and Physical Activity Analysis ☐ Demographic Analysis ☐ Well-Being Analysis ☐ Interactive Dashboard ☐ KPI Cards and Charts

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	Computer/Laptop for data processing and dashboard development	Intel Core i5/AMD equivalent or higher
Memory	RAM required for data processing and visualization	Minimum 8 GB RAM
Storage	Storage for dataset, project files, reports, and dashboard files	Minimum 256 GB SSD
Software		
Frameworks	Data analysis and dashboard development	Power BI / Jupyter Notebook
Libraries	Data processing and analysis	Pandas, NumPy, Matplotlib, Seaborn
Development Environment	Environment for writing and executing analysis code	Jupyter Notebook / VS Code

Data		
Data	Smartphone usage, digital addiction, and well-being data	Kaggle or other suitable public dataset
